The dark streamlined windows have remained the same for exactly 60 years. There is no need to read the name: even from a distance, a Sanlorenzo yacht is immediately recognizable, at first glance. But then there is all the rest. Once on board, you can breathe in the atmosphere, enjoying the seamless layout, grasping through all your senses the painstaking attention to detail. It is the sophisticated craftsmanship of a very high-tech object, an apparent contradiction that somehow manages to coexist in a Sanlorenzo yacht. Nothing happens by chance: if Massimo Perotti, combining managerial ability, vision and a magic touch, has made all this possible today, it is thanks to the history of Sanlorenzo, rooted in the shipbuilding tradition of Limite sull'Arno where the firm was founded in 1958, and in the progress generated in the 1970s by the owner at the time. Those boats so coveted by yachtsmen for their comfort, reliability and tailor-made quality have

And they will continue to be contemporary, as happens with truly timeless objects.

evolved, since 2005, to become contemporary while

keeping faith with their background of excellence.

YACHT

To create yachts that are reliable and durable, what counts is the material, and above all skillful minds and hands to shape it. The craftsmen make the difference, representing the human capital that Sanlorenzo has gathered at the production sites in Massa, Viareggio, and at Ameglia, inside the nature reserve of Montemarcello.

The four ranges of Sanlorenzo yachts in composite material (SL, SD, SX and SP) come to life here, in these model facilities organized with the most modern and eco-responsible production systems, thanks to the work of artisans who pass down their skills from father to son, and apply them to every single boat.

The primary material for hulls, decks and superstructures is a composite, a mixture of fiberglass or carbon fiber with special resins. While the hull and deck are made with fiberglass, the superstructures feature a composite based on carbon fiber, lighter and stronger, capable of granting greater stability to the boat on the water, for maximum on-board comfort.

The structure of each yacht comes from a mould made with the most advanced materials and technologies, to ensure a perfect balance between aesthetics and durability in time. But at the heart of the production of a Sanlorenzo yacht there are two techniques of workmanship: lamination, used for all the hulls, namely the application by hand of the composite material in the mould, with maniacal care, layer after layer, and infusion, a dry process which prior to the addition of resin makes the fibers compact with a vacuum method; applied for the superstructure and the deck, this process considerably improves performance.

Men and their skills represent the added value of a Sanlorenzo yacht: from the unique excellence of the staff, to the dedication with which the craftsmen approach the work on the interiors, finished with the same unique tailor-made quality found in high fashion. A perfect synthesis of skill, experience and passion.

3

SD FLEET

Today, owners seeking the experience of full travel enjoyment can find it in this line of navetta yachts. The series offers four models in composite material: the SD90, SD96, SD118 and SD126, in lengths from 27 to 38 meters, offering outstanding range to reach even the most faraway destinations at continuous speed, without compromises.

These yachts have three and four decks, but thanks to intensive work on proportions their image is particularly streamlined and light.

Every yacht offers various interior layout possibilities, and can be completely personalized to suit the tastes and passions of its owner. SD 90/

SD 96/

SD 118/

SD 126/

SD 96/80

Reinterpreting the lines and relaxing spirit of the historic yachts of the 1930s, the SD96-80 combines a streamlined profile with sophisticated interiors created by the designer Patricia Urquiola, approaching her first onboard project. Soft forms, refined materials and versatility of spaces make this an ideal yacht for the pleasures of spending time out on the water. The large main living area is its symbol, thanks to two strong features: a custom bench that can be converted with a single gesture to become a large dining table, and a striking staircase in Silk Georgette marble, steel and wood, bordered by a screen of perforated metal. The owner's cabin offers aesthetic touches that encourage relaxation, especially the game of curves between the solid grosgrain oak paneling and the walls in blue glass, suggesting the image of waves. The concept of double duty is also applied to the lounge leading to the cabins, furnished with two sofas that can be converted for use as beds. The upper deck, with a veranda effect open on three sides, can easily be transformed from a living area to a dining room or cinema zone, thanks to the versatility of the furnishings.

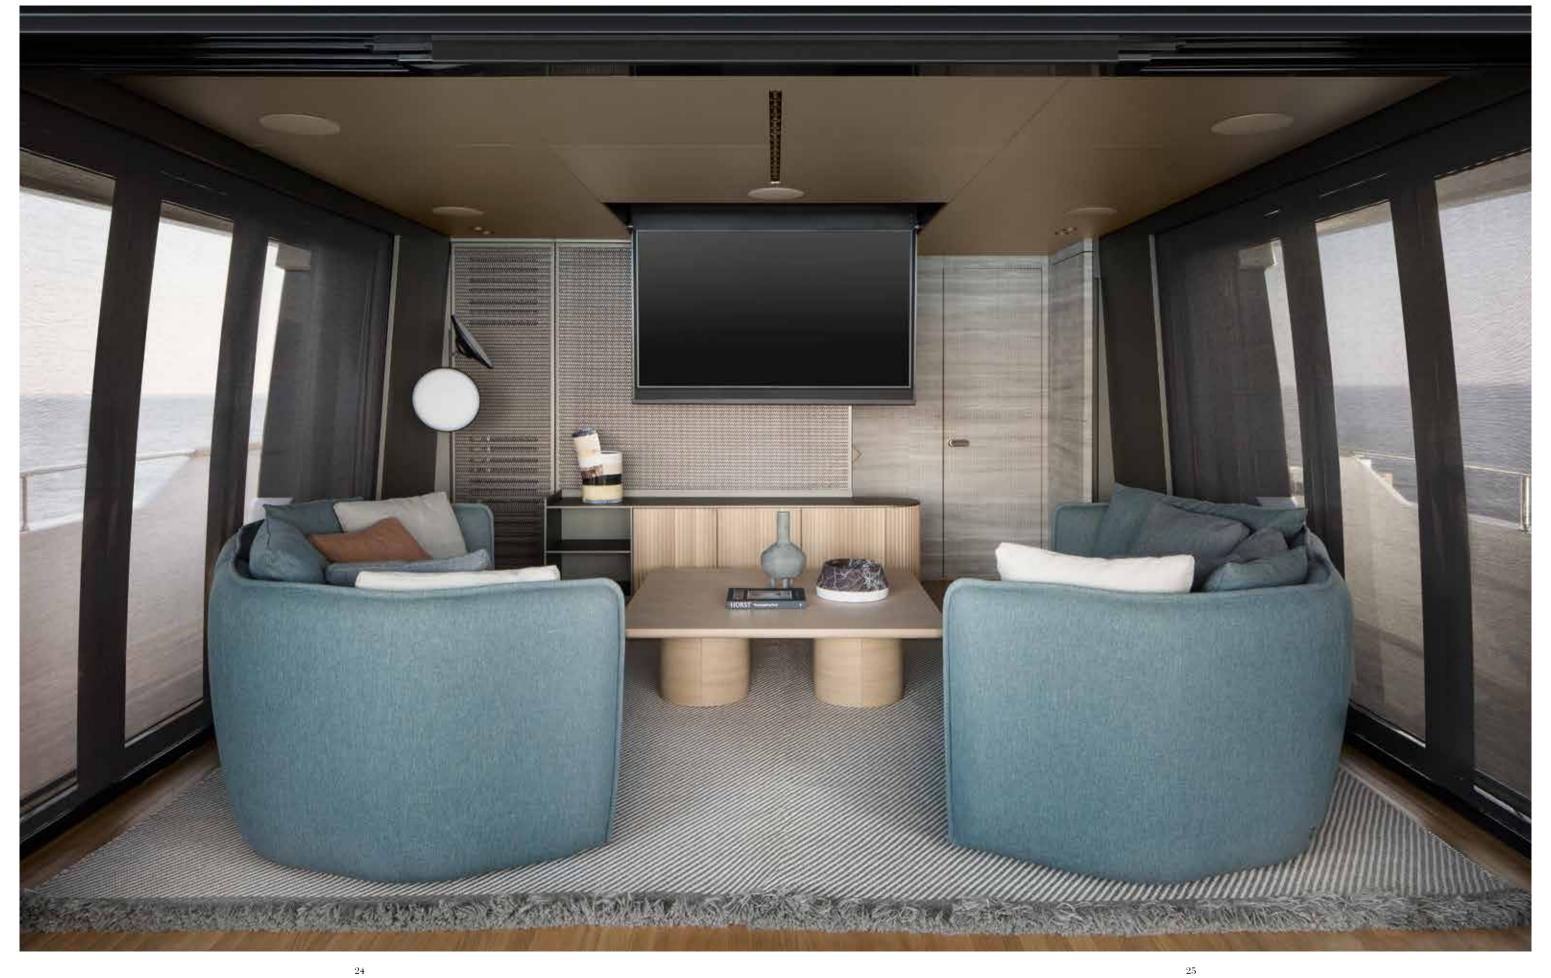

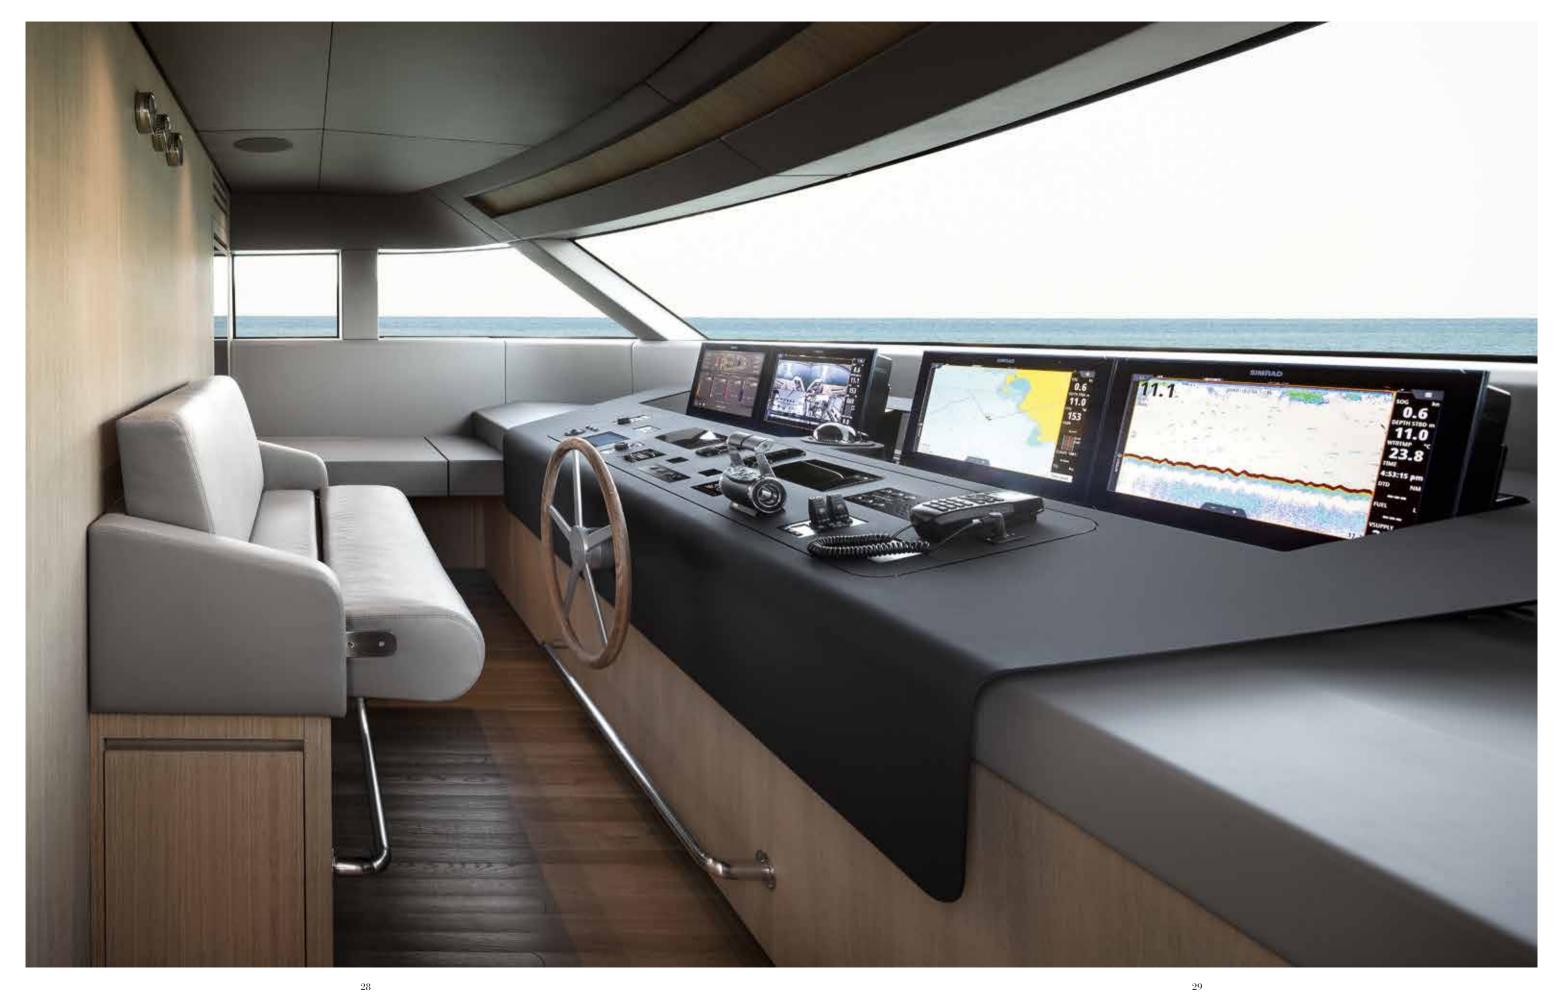

UPPER DECK

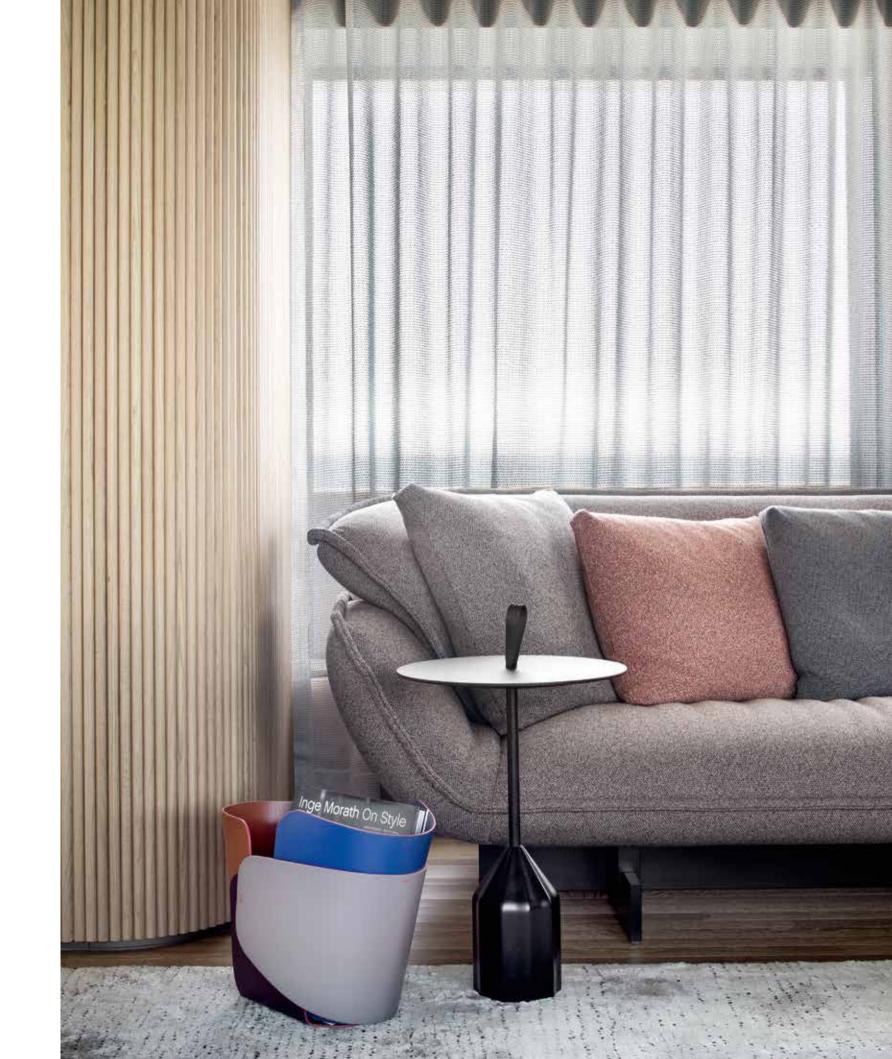

Main salon and its striking staircase in marble, steel and wood, bordered by a screen of perforated metal.

Owner's bathroom.

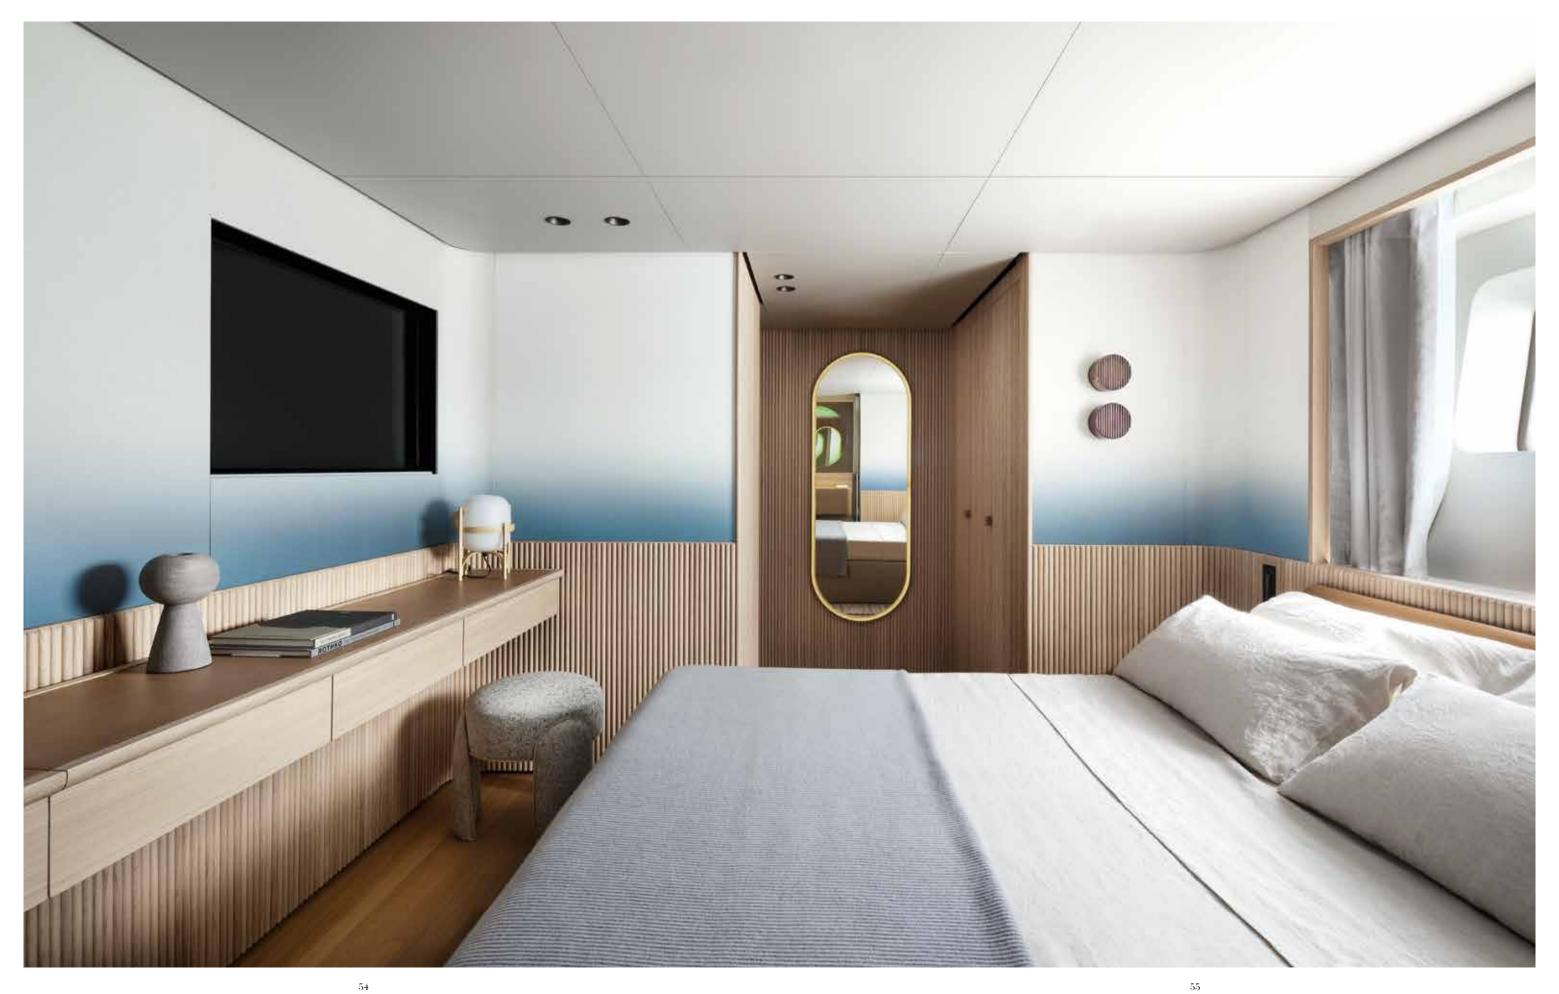

LOWER DECK

SD 96/82

The lead-colored lacquer ceiling, the warm tones of leather, the grosgrain cladding in dark oak: Patricia Urquiola's interior design has inspired a boat that puts the most sophisticated international style onto the sea. The living has a club-like atmosphere with large sofas covered in biscuit-colored leather and pale gray fabric, and oak flooring with a motif of boards to generate a particular rounded effect. The Nepalese carpet from the early 1900s echoes the gray of the ceiling and the fabric incorporated in the glass that shields the staircase, in marble with vertical grain. The same mood returns in the owner's cabin, where the protagonist is the leather bed enhanced by theatrical paneling in glass and fabric. Elegant curved bedside units and a small console complete the décor, while the dressing room is the perfect replica of a domestic closet: the wardrobes totally vanish behind doors clad in grosgrain oak. The upper deck is a single dining zone furnished with an oval table, set between a floor and ceiling of slats and completely open to view from the outside.

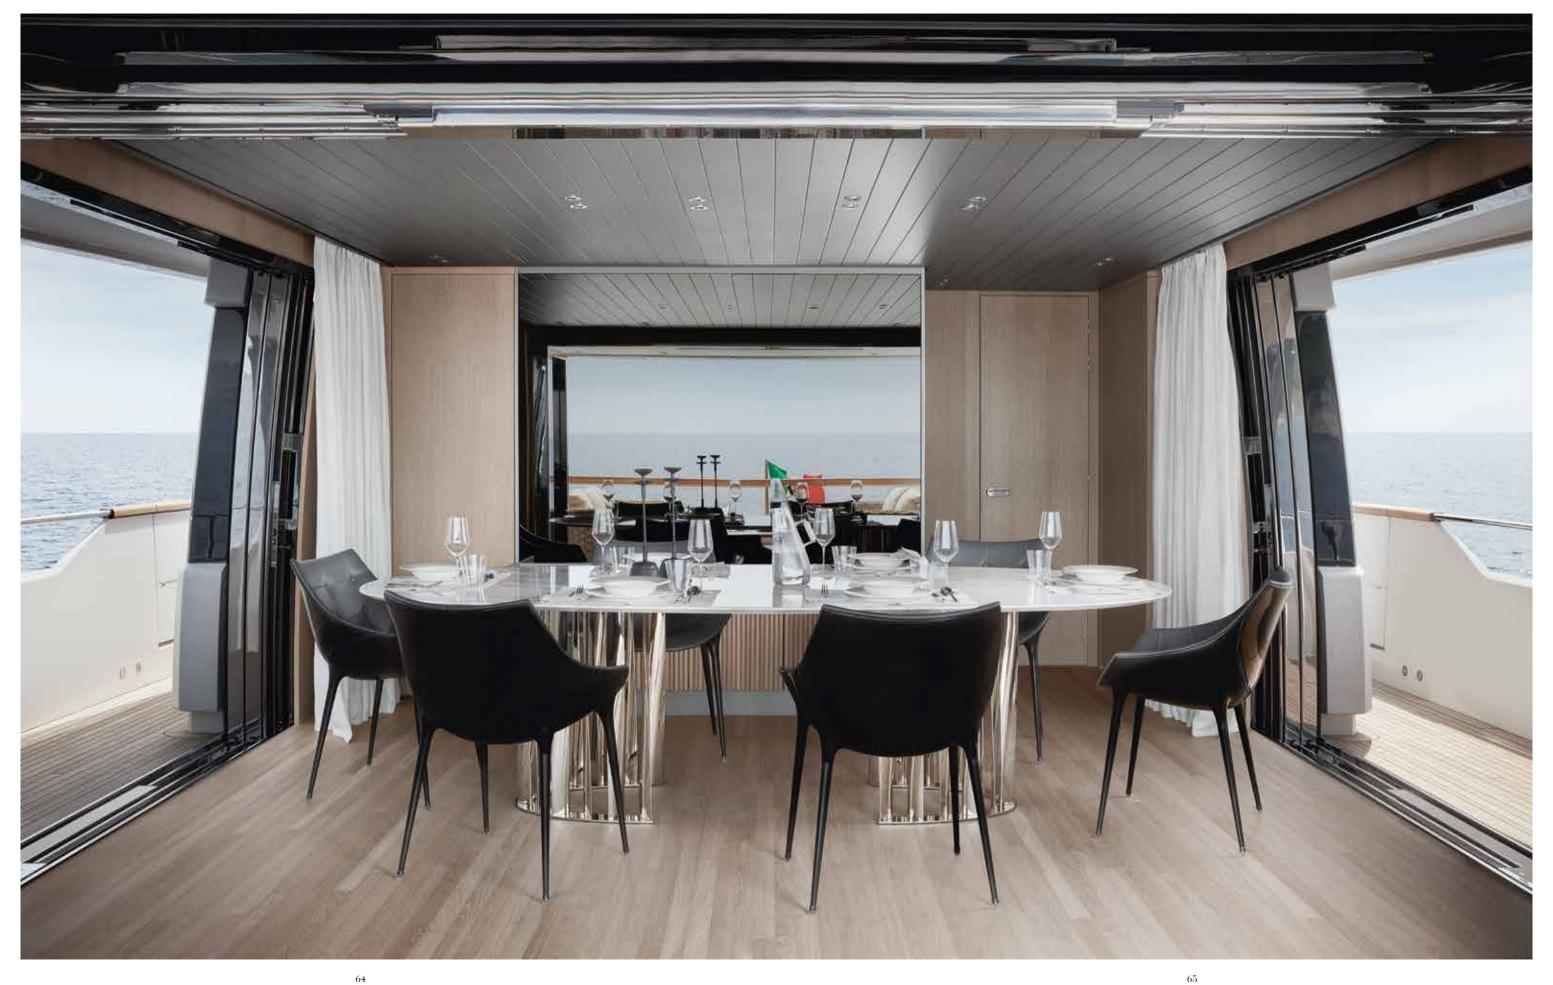

UPPER DECK

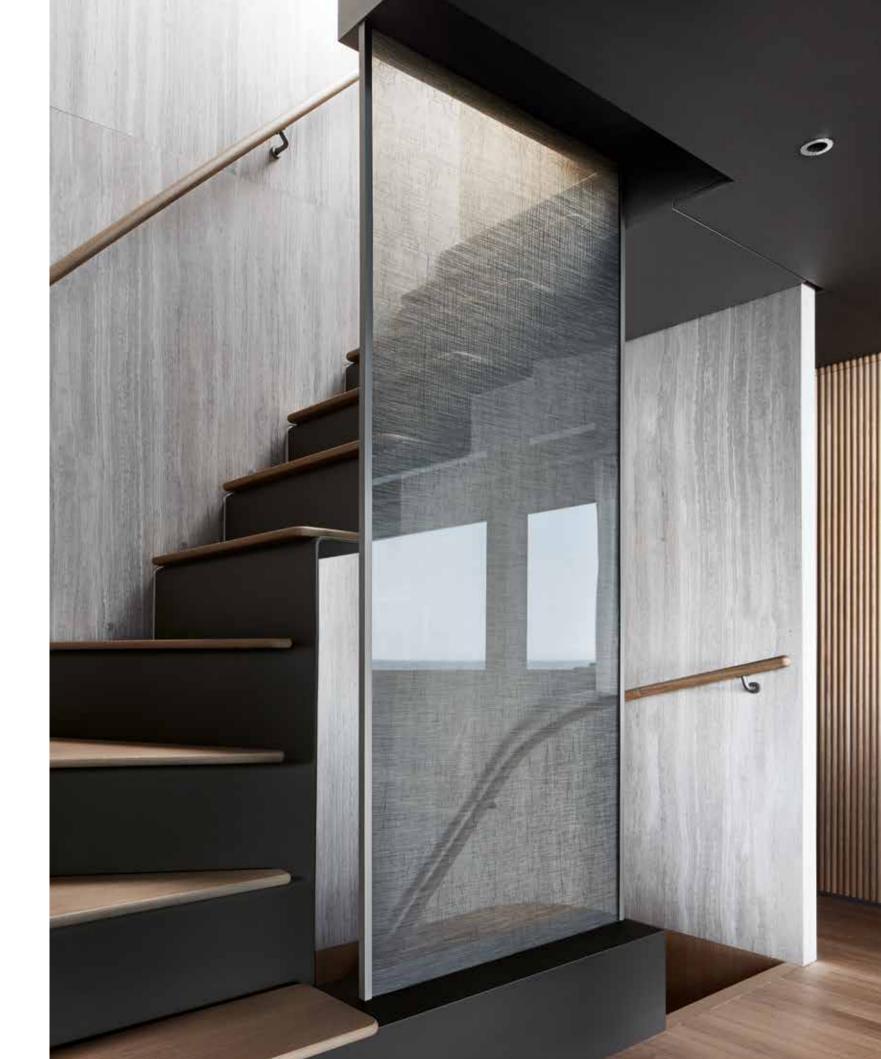

The upper deck salon is completely open to view the outside

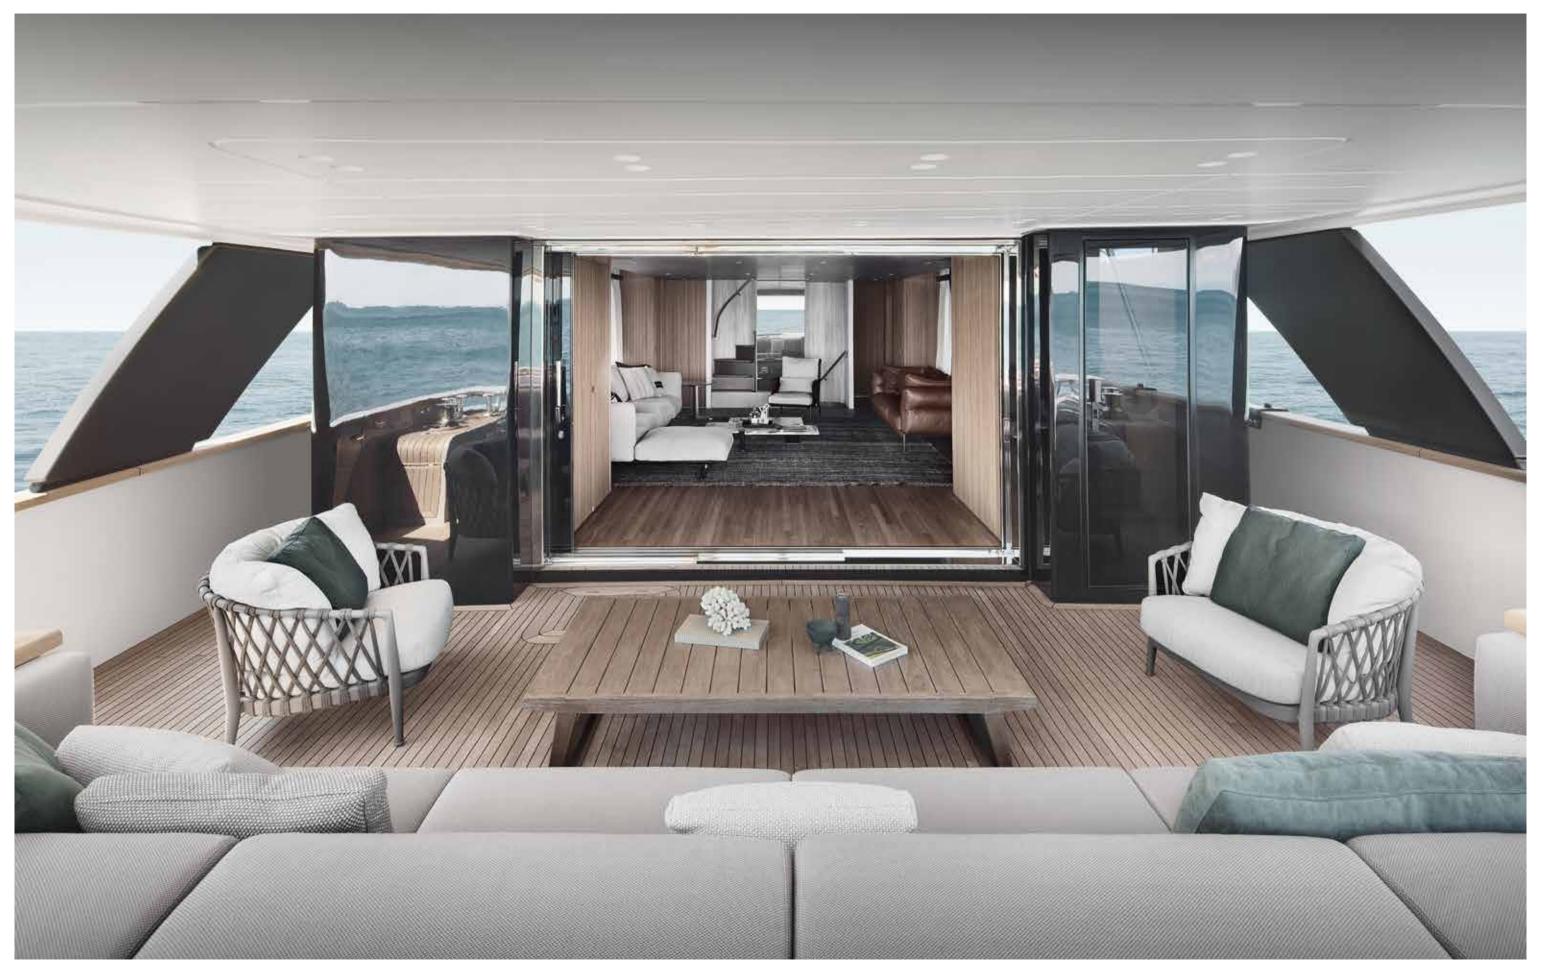

Staircase in marble, shielded by glass and fabric. Next: the club-like atmosphere of the main salon. Cockpit to follow

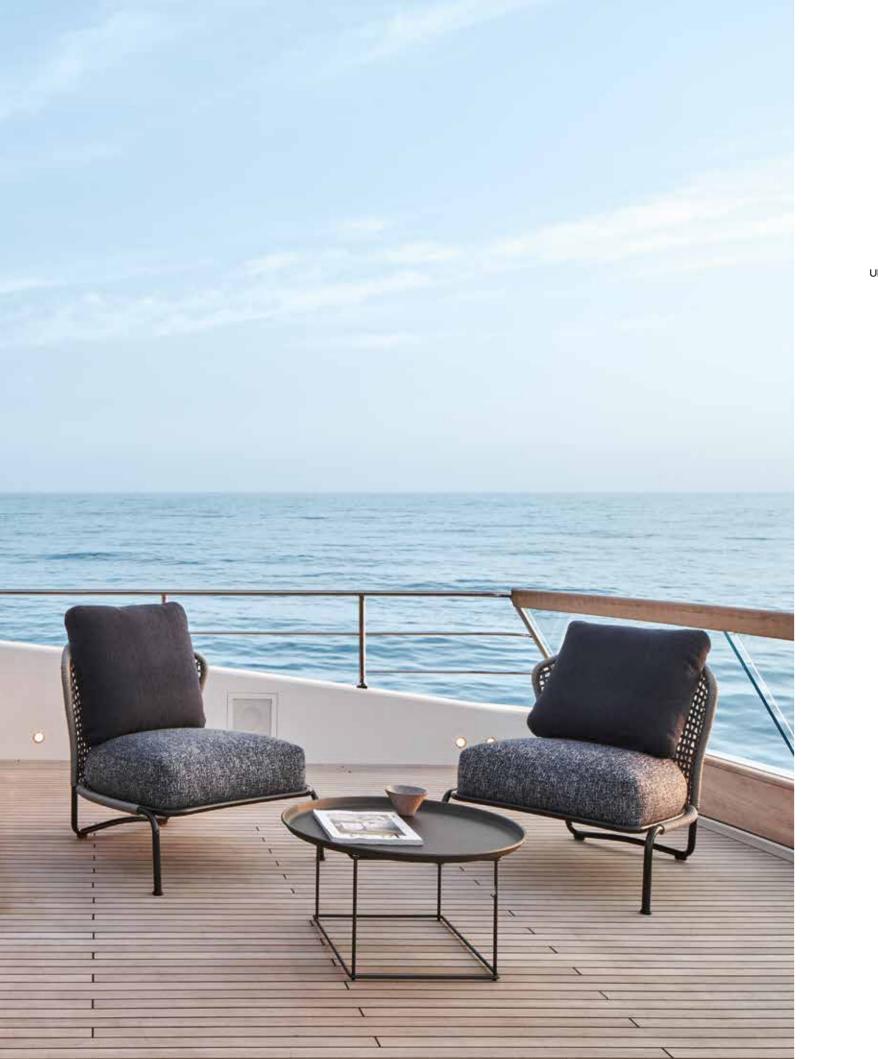

SD 96/93

The sober elegance that reflects the most genuine spirit of yachting. The SD96-93 living area initiates the atmosphere, alternating neutral tones of leather seating with the sophisticated orange hue of the ottomans, cushions and carpet. The understated aplomb is accentuated by the flooring in large Canaletto walnut planking, and the walls clad in finest walnut. The panel that divides the staircase, in Murano glass with a 3D effect, adds a further touch of refinement. Intentionally neutral but with a vivid character, the owner's cabin at the bow has the prelude of a dressing zone, with leather coverings that continue from the headboard to the curved walls. On the upper deck, the large space for use as a dining area or screening room is furnished with two chaises longues, a carpet in tones of blue and a coffee table that converts into an extensible dining table. The outdoor zones also offer a sense of total versatility, while in the cockpit a large sofa and two modular tables create a dining area sheltered from the wind.

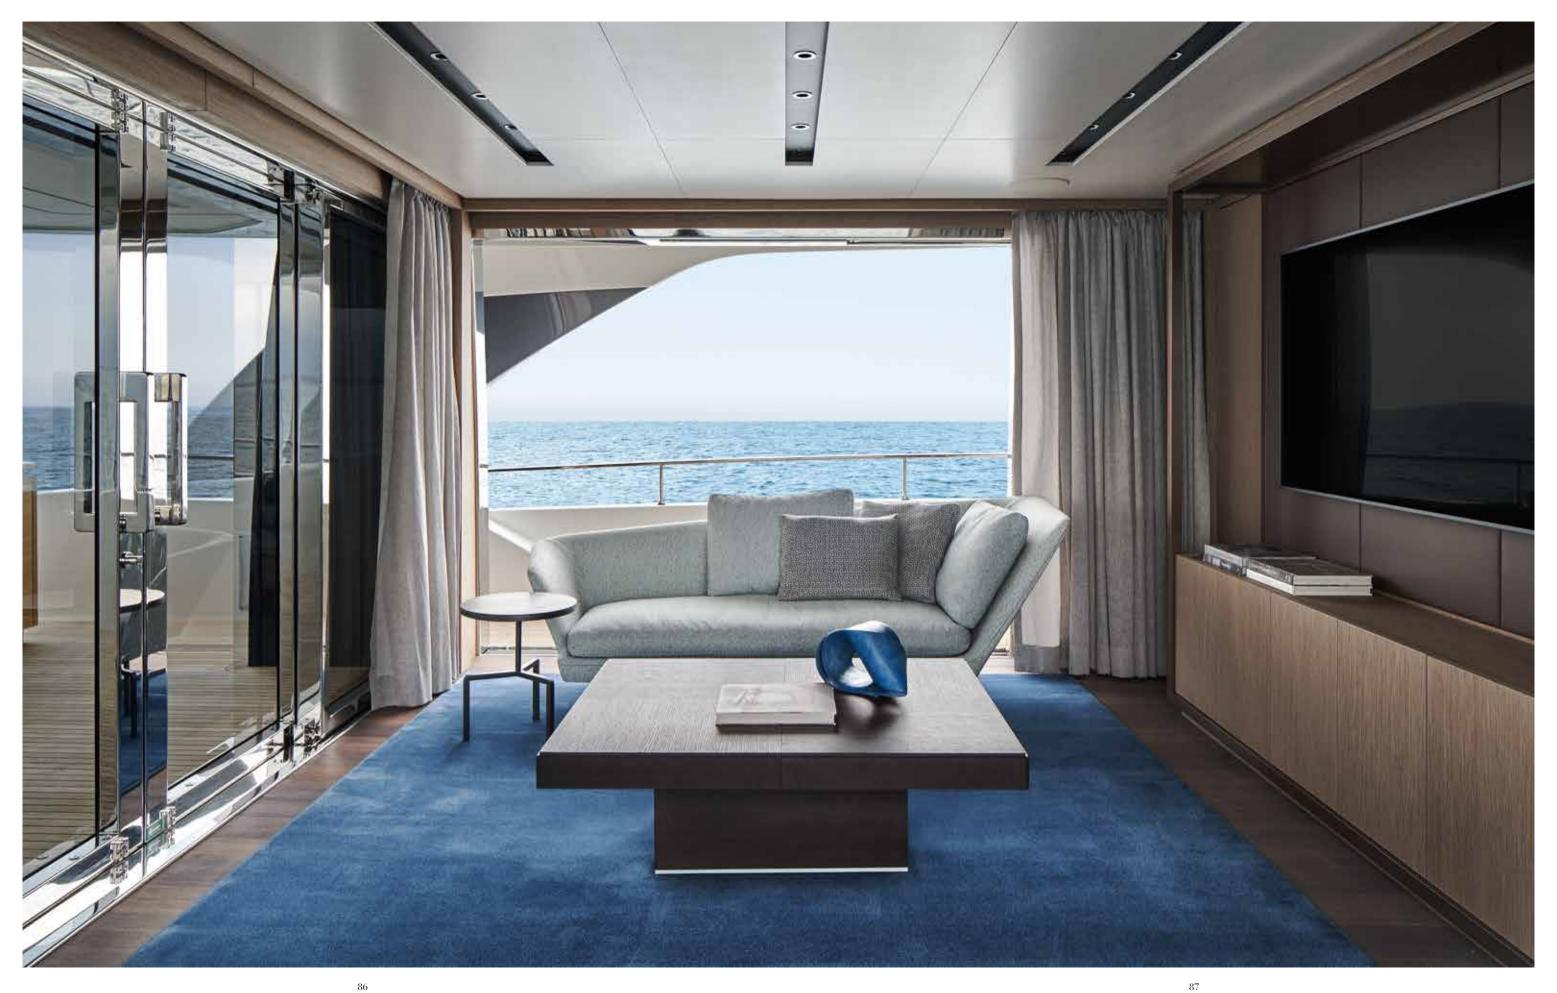

UPPER DECK

MAIN DECK

The sober elegance of the main salon with a staircase panel in Murano glass.
